DEPARTMENT OF AGRICULTURE, BENGAL.

Third and Final Forecast of the Spring Oilseed Crops of Bengal, 1923-24.

(NOTE.—On an average of the five years ending 1921-22, the area under linseed in Bengal has represented some 5·4 per cent. and that under rape and mustard 17·5 per cent. of the total areas under these crops in British India.)

Character of the season.—As indicated in preceding forecasts, the weather was generally favourable at the outset, but subsequently the crop was damaged by a long spell of drought which considerably reduced the outturn in many districts. On the whole the season has been an unfavourable one.

Acresage.—The total area under these crops (excepting sesamum for which separate forecasts are issued) is returned at 882,500 acres this year as against 905,400 acres last year.

Outturn.—From the District Officer's estimates, the provincial outturn of the different linseed crops works out at 72 per cent. of the normal as against 78 per cent. last year.

Taking 5½ maunds as the normal rate of yield per acre for linseed, 6 maunds for rape and mustard and 4½ maunds for other oilseeds, the total yield for the Province is estimated at 137,800 tons this year as against 153,400 tons last year.

Director of Agriculture, Bengal (offg.).

DEPARTMENT OF AGRICULTURE, BENGAL.

Final Forecast of the *Wheat* Crop of Bengal, 1923-24.

[NOTE.—On an average of the five years ending 1921-22, the area under wheat in Bengal has represented some 0.4 per cent. of the total area under wheat in India. The ratio of the irrigated wheat acreage to total wheat acreage in (a) British India, (b) in the territory now reported on has, in the five years ending 1921-22, averaged (a) 44.3, and (b) 13.2 per cent. respectively.]

Character of the Season.—At the time when the third forecast was issued the harvesting of the crop was already begun. The dry weather which continued up to the middle of April was favourable for threshing operation.

Area Sown.—According to the District Officers' estimates, the total area sown amounts to 120,400 acres this year against 121,800 acres last year.

Outturn.—From the district estimates the provincial outturn works out at 62 per cent. of the normal against 75 per cent. last year.

Taking the normal yield to be $8\frac{1}{2}$ maunds per acre, the gross yield of the crop for the Province is estimated at 22,900 tons this year against 28,700 tons last year.

At the end of April, the average wholesale price of wheat at the principal marts of the Province was Rs. 5-5-4 per maund or about 3.03 per cent. and 21.5 per cent. lower than the prices ruled at the corresponding periods of last year and the year preceding respectively. The average wholesale price of common rice at the principal marts, on the other hand was Rs. 5-11-5 or about 0.36 per cent. and 7 per cent. lower than the prices at the corresponding periods of last year and the year preceding, respectively.

J. C. ROY, for Director of Agriculture, Bengal.

Dacca, the 17th April 1924.

DEPARTMENT OF AGRICULTURE, BENGAL.

Monthly Weather and Crop Report of Bengal for April, 1924.

I. **Character of the season.**—The weather was exceptionally hot and dry till the middle of the month after which precipitation occurred over the greater part of the Province especially in North and East Bengal. The usual rainfall statement is appended.

II. **Progress of agricultural operations.**—The rain during the second-half of the month facilitated the cultivation of kharif crops which had been brought to a standstill by drought, and revived the prospects of jute, autumn and deep water paddy, sowings of which had been seriously delayed especially in the low lands of Eastern Bengal.

III. **State of standing crops.**—The condition of standing crops was reported to be fairly satisfactory.

IV. **Prospects and probable outturn.**—The outlook of paddy and jute appears to be promising in Eastern Bengal. Wheat yielded about 62 per cent. of the average.

V. **Damage to standing crops.**—Damage to summer rice and mango crop by hail-storm was reported from Malda.

VI. **Condition of agricultural stock.**—The condition of live-stock was reported to be satisfactory. Sporadic cases of cattle disease were, however, reported from parts of fifteen districts.

VII. **Failure of pasturage and fodder.**—Insufficiency of fodder was not reported from any part of the Province.

VIII. **Prices of food-grains.**—During the second fortnight of the month prices of common rice of the cheapest quality fell in two districts, rose in eleven and remained stationary in the rest of the Presidency. The price ranged from 8 seers per rupee at Rangpur to 9 seers per rupee at Midnapore.

IX. **Condition of agricultural population.**—The condition of the agricultural population was reported to be satisfactory on the whole.
